

Solar Save for quality and reliability

When installing solar energy you are doing so because it's an investment. Your decreasing energy cost will continue for a lifetime. A Solar Save installation uses the latest advanced flat plate panel's connected to state of the art controls. Our FREE, no obligation survey, shows the panel installation and the internal arrangements.

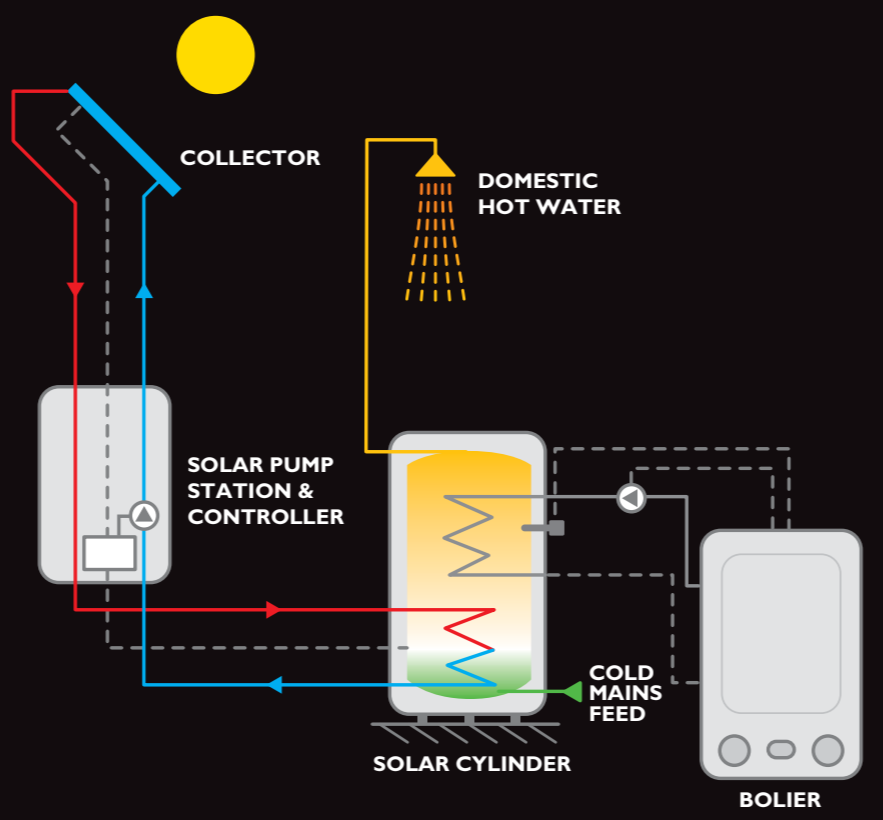

Solar Save SW is an accredited solar energy supplier and installer. We are members of the Solar Trade Association. You are joining a list of customers who continue to enjoy the cost savings that solar energy provides. To provide our customers with the maximum benefits, we only install high performance, quality solar panels.

Solar Save panels work on the principle of high light absorption and are not dependent on high temperatures or long periods of sunshine.

Once installed we provide a bi-annual maintenance contract with bi-annual servicing. This ensures maximum working efficiency and the continuing energy cost benefits for you. We guarantee all our installations parts and labour for 2 years. However the solar panels are guaranteed for 10 years. Fully qualified and accredited installers assure a trouble free installation with minimum inconvenience.

Remember – we are a local company with an excellent history of customer service throughout Devon and Cornwall. Using a local company reduces your carbon footprint and helps to improve the environment. Buy locally for reliability

Solar save – install today save tomorrow

Save energy costs from the day of installation.

Solar Save's experienced surveyors and installers ensure an installation with minimal disruption. We recognise how important saving energy costs have become.

Solar Save - a local Devon company ideally placed to cover installations throughout Devon and Cornwall. We provide honest professional advice, without any pressure selling. You will find us friendly to talk to and our installers are qualified to undertake the most demanding installations.

We also offer special finance package with Solar Save SW subject to circumstances and application approval.

So- as you can see you have everything to gain and nothing to lose.

Solar save – energy for free

Solar power your hot water
 The energy age is here

Endless hot water the solar reward

Every day, every body uses hot water – including you. The cost of continuously heating water by oil, gas or electricity rises each year. Your solar energy is free for life.

Solar power is the basis of all life on earth. Solar energy is constant, even on dull days. Touch your car roof on a sunny day and experience how hot it is. This is the power of solar energy. **Solar Save** converts this free energy into hot water resulting in cost savings for you. It is nature's invitation to benefit from her resources.

Installing solar powered water heating installs energy savings for life. These daily energy savings also reduce the carbon dioxide emissions. **Solar Save** thermal panels make a positive contribution to the environment.

If you have a high hot water demand then you are in the **High Saver Range**. Hotels, guest houses, schools and colleges or houses with swimming pools can all achieve huge savings. **Solar Save** heating panels are the most cost effective method to reduce your energy bill

Additionally, there are grants to help with the cost of installation. Businesses are able to claim 100% first-year capital allowance against the installation cost (Enhanced Capital Allowances). This can provide a helpful cash flow boost and also shorten the pay back period.*

Solar save – hot water for life

The solar rewards

Installing **Solar Save** energy panels is an investment that -

- Reduces your energy costs immediately
- Continues to reduce energy costs for life
- The only property improvement that provides a pay back.
- Pay back time depends upon the hot water use and consumption.
- Improves the energy efficiency of the building
- Adds value to your property
- MORI survey reports house value likely to increase by £10,000
- MORI also reports that HIPS shows homes with poor Energy Assessment lose value and are harder to sell.

The greater the use of hot water leads to greatest savings. Heating water is a high cost in any energy bill. With continuously rising charges your solar savings value increases. Harnessing the power of the sun for life will **reduce** your water costs by up to 50-70%. Continuing to use fossil fuels will always increase your costs.

- **Hotels and guest houses** – visitors pay little heed to your energy costs. Solar Save reduces these for you.
- **Nursing and residential care homes** – cost reductions for life
- **Swimming pools** - constantly warmed by natural sunlight for FREE
- **Schools and colleges** – continuous savings
- **Heavy domestic users** – improving lifestyle by reducing costs
- **High hot water business users** – adding to your profits

Solar save – energy for free

Sustainable energy reward

Opinion is changing about the continued consumption of fossil fuels. Realising the environmental damage and continuously rising costs has focused changes. Daily life now means renewable energy. Nature can provide us with natural resources which are sustainable for life.

Solar energy is available globally. The energy age is here. Over 40% of the UK's carbon dioxide emissions, the main greenhouse gas which causes climate change, come from our daily lifestyle. Such as heating water. A simple change to using solar energy saves money and helps the environment.

Rich rewards from your roof

Your roof is capable of doing more than just keeping the weather out. It can pay you an income!

It starts with a FREE survey of your property by **Solar Save** to show the most suitable installation layout. There is no obligation to accept our survey and quotation.

Elegant, advanced design solar panels, often positioned on the roof, harness the sun's power and transfer it to an internal hot water tank. The panels capture both direct and diffused sunlight. The bespoke installation is simple, quick and unobtrusive.

Solar Save – brings sunshine to your bills

In the south west we receive up to 1200kW per metre annually. Water heating in the average house takes 3000 kW annually. It's not difficult to see the advantage of changing. The 1200 kW of course is FREE energy. This is why solar water heating is the fastest growing renewable energy source in Europe. (source – Solar Trade Association)

Solar save – suns power harnessed

Solar Save is a fully accredited supplier and installer. All our work is guaranteed. We also provide a bi-annual maintenance service to ensure maximum efficiency or performance. Remember we are also a local company serving the West Country.

The south-west is a high solar energy area. Devon and Cornwall are the highest in the region. The higher the energy capture the greater your savings.
